

PROGRESSIVE PROJECT REPORT
ONLINE EBOOK STORE

ABSTRACT

The title of our project is Online E-Book Store. The project will work as a complete user interface for E-book Service Process .The purpose of this project is to provide a friendly environment to download the books for free. The user can read online and they can download the PDF and read offline as well. The main reasons for people buying e-books are low prices, increased comforts i.e they can buy from home or on the go with mobile devices and a larger selection of titles. E-books are portable and lightweight to carry around. As the content here is cloud based it can be easily updated. Readers have features where they can adjust the brightness of the screen according to the time of the day and depending upon their preferences . E-Books have been designed with text to speech or read aloud features. This allows people to listen to the E-Books if they are too busy to read it. Here we include interactive features in an eBook which makes the reading experience a more engaging one. External links are included to offer additional information.

About

The main objective of the project is, the user can get free of cost platform where they could easily read, download and share E-Books. There are few readers who can't afford to take the membership and download. But here, the user can see that each and every person who comes to our website and they can read the book. The user can share the links of the books and can read with others as well. Here the different category of books is available. The user can choose what they like and read the book .They can download the books for free.

Users

The purpose of this project is to provide a friendly environment to download the books for free. The user can read online, and they can download the PDFand read offline as well.

Here we have 3 types of users

- Administrator
- Guest Users
- Main Users

System Analysis

Operating System	:-	Windows
Front End	:-	HTML, CSS, JavaScript
Back End.	:-	PHP, MySQL
Editor Tools	:-	Visual Code
Browsers	:-	Mozilla, Google Chrome, Opera, IE8
Technology Implemented	:-	Apache Server

HTML is the most basic building block of the web page. It defines the meaning and structure of web content. Other technologies besides HTML are generally used to describe a web page's appearance / presentation (CSS) or functionality/ behaviour (Javascript).

CSS stands for Cascading Style Sheets. It describes how HTML elements are to be displayed on screen, paper, or in other media. It also saves a lot of work. It can control the layout of multiple web pages all at once. External stylesheets are stored in CSS files.

PHP is a general purpose, server-side scripting language run on a web server that is designed to make dynamic pages and applications. PHP also supports database management systems and other open source databases. This platform is quite fast and considered as the best option for building webpages. PHP is an affordable option for getting responsive sites built quickly.

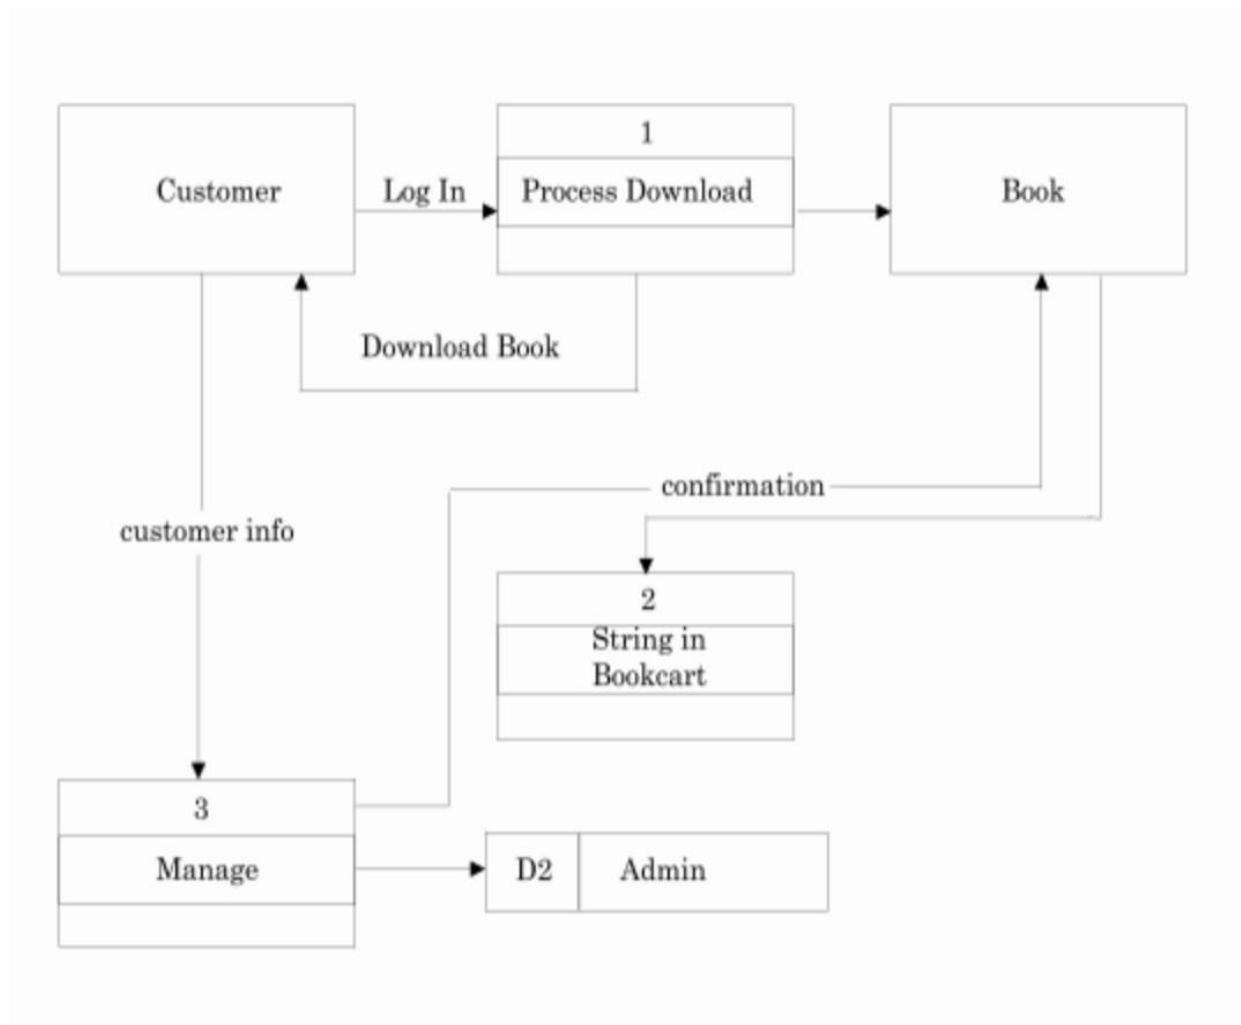

MySQL is an open source relational database system. It runs as a server and allows multiple users to manage and create numerous databases.

HARDWARE SPECIFICATION

RAM :- 2 GB

Processor :- i3 Processor

Flow Chart

EXISTING SYSTEM

In the existing system, whenever library members wish to take a book, the book issued by the library authority will check both the book details as well as the members details and store it in the library database and then only the book can be issued from the library. This often takes a lot of time. For reading the books through online people need to pay for downloading it.

PROPOSED SYSTEM

The proposed system is a web based online book reading system for both the kids and adults. The website will provide a list of books, adding/ updating books, links to other books etc. The user can give their feedback .This website is providing help for some people, who can't read because of money and awareness of using websites. In this new system people can download books for free.
